3. Instructions for use

- Inner sub-repository, if necessary after cloning, you need to update the sub-repository

```
git clone https://gitee.com/mFlying/ssd2xx-demo.git
cd ssd2xx-demo
git submodule init
git submodule update
```

Compile the demo of SSD20x

- Cross-compilation tools, cmake and other tools are installed.
- The compilation process is as follows:

```
mkdir build
cd build
cmake -D CMAKE_TOOLCHAIN_FILE=toolchain.cmake -D CHIP=ssd20x ..
make -j8
```

Compile the demo of SSD2x2

- If you have **cmake** passed other CHIPS before, you need to delete the files from cmake before

```
cd build
rm * -rf
cmake -D CMAKE_TOOLCHAIN_FILE=toolchain.cmake -D CHIP=ssd2x2 ..
# 全部编译
make -j8
# 可查看有什么demo, 之后可指定DEMO编译
make help
make pwm_test1
```

- The files generated after compilation are in /build/bin & /build/lib
