After make is compiled, the file system ...
 8ms开发工具平台 5篇

<https://buildroot.org/downloads/>.

- Download project
Download source/project.tar.bz2 from Baidu
Cloud link.
- Download source/Release_to_customer.sh
- Download the cross compilation tool
Download source/gcc-arm-8.2-2018.08-
x86_64-arm-linux-gnueabi.tar.gz
from Baidu Cloud link
- 下载patch
从百度云链接下载
patch/ssd201_kernel_4.9.84.patch 和
patch/ssd201_u_boot_2015.01.patch。

安装交叉编译链

解压 gcc-arm-8.2-2018.08-x86_64-arm-linux-
gnueabi.tar.gz # tar -xvf gcc-arm-8.2-2018.08-
x86_64-arm-linux-gnueabi.tar.gz -C .

修改环境变量

vi ~/.bashrc

验证

source ~/.bashrc

which arm-linux-gnueabi-gcc

安装 SDK 源码

将“源码下载”步骤下载的文件放在 Linux 系统同
一个目录下,接着执行以下步骤完成 SDK 源码
的安装。

安装 uboot 源码

tar -jxvf u-boot-
2015.01.tar.bz2 -C .

cd u-boot-2015.01

patch -p1 <
.../ssd201_u_boot_2015.01.pa
tch

SSD201系列开发文档&... 43篇
After make is compiled, the file system ...
8ms开发工具平台 5篇

解压 project 源码

tar -jxvf project.tar.bz2 -C .

源码编译

在完成第一章的工作后, 我们将得到一个目录包
含如下文件:

配置编译脚本

编译脚本为 Release_to_customer.sh, 通过它可
以编译整个工程, 包括 uboot、kernel 和
rootfs。在运行前需要对其修改配置:

- ☐ 修改镜像保存路径, 镜像保存于
\${RELEASEDIR}/images/目录下;

RELEASEDIR=/home/ronnie/
work/ssd201/ssd20x_sdk_v00
8

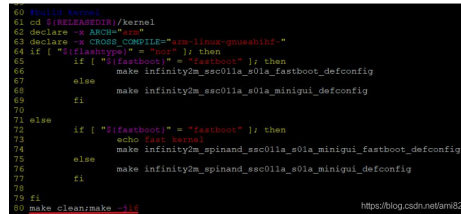

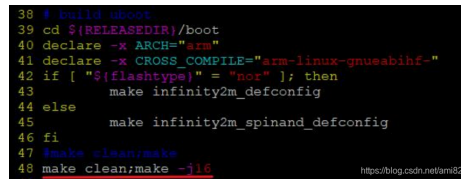

Modify ARCH to arm

export ARCH=arm

Optimize the compilation speed

and start compiling

It can be seen that when the
Release_to_customer.sh script is executed,
three parameters (-f, -p, -q) need to be passed;
-f indicates the type of flash, optional nand, nor;
-p indicates the chip model, which can be Select
ssd201, ssd202.

分类专栏

tar -jxvf buildroot-2020.05.tar.bz2 -C .

乐鑫ESP方案及开发文档 92篇
cd buildroot-2020.05/

安卓核心板方案 4篇
ARCH=arm make menuconfig

SSD201系列开发文档&... 43篇
After make is compiled, the file system ...

8ms开发工具平台 5篇

```
5 f)
6 flashtype=$OPTARG
7 ;;
8 p)
9 project=$OPTARG
10 ;;
11 q)
12 fastboot=$OPTARG
13 ;;
14 \?)
15 echo "Invalid option: -$OPTARG" >&2
16 ;;
17 esac
18 done
```

here take nand+ssd201 as an example, start
compiling the source code:

./Release_to_customer.sh -f nand -p ssd201

After the compilation is completed, the system
images will be generated in the images
directory, and then we can burn these images
into the chip through the operations in Chapter
3.

```
~/workspace/esp32/esp32-2015.01$ cd images
~/workspace/esp32/esp32-2015.01/images$ ls
auto_update.txt  cis.bin  ipd_cust_1.bin  kernel  miniservice.ufb  scripts
~/workspace/esp32/esp32-2015.01/images$
```

After compiling once, if you do not change the
chip model, you can comment the make clean of
uboot and kernel in Release_to_customer.sh.

```
39 cd $(RELEASEDIR)/boot
40 declare -a ARCH="arm"
41 declare -a CROSS_COMPILE="arm-linux-gnueabi-"
42 if [ "$flashtype" = "nand" ]; then
43     make infinity2m_defconfig
44 else
45     make infinity2m_spinand_defconfig
46 fi
47
48 make -j
49
50 if [ "$flashtype" = "nand" ]; then
51     if [ -d ../project/board/12m/boot/nor/uboot ]; then
52         cp u-boot.kz.img.bin ../project/board/12m/boot/nor/uboot
53     fi
54 else
55     if [ -d ../project/board/12m/boot/nand/uboot ]; then
56         cp u-boot_spinand.kz.img.bin ../project/board/12m/boot/nand/uboot
57     fi
58 fi
59
60 # Build kernel
61 cd $(RELEASEDIR)/kernel
62 declare -a ARCH="arm"
63 declare -a CROSS_COMPILE="arm-linux-gnueabi-"
64 if [ "$flashtype" = "nand" ]; then
65     if [ "$fastboot" = "fastboot" ]; then
66         make infinity2m_esc01a_s01a_minigui_defconfig
67     fi
68     make infinity2m_esc01a_s01a_minigui_defconfig
69 fi
70
71 if [ "$fastboot" = "fastboot" ]; then
72     make fastboot_defconfig
73     make infinity2m_spinand_esc01a_s01a_minigui_fastboot_defconfig
74 else
75     make infinity2m_spinand_esc01a_s01a_minigui_defconfig
76 fi
77 fi
78
79 make -j
80
```

Compiling buildroot

Release_to_customer.sh does not include
buildroot's configuration, so buildroot needs to
be configured separately.

tar -jxvf buildroot-
2020.05.tar.bz2 -C .

cd buildroot-2020.05/

ARCH=arm make menuconfig

Target options ->

```
Target Architecture (ARM (little endian)) --->
Target Binary Format (ELF) --->
Target Architecture Variant (cortex-A7) --->
Target ABI (EABIhf) --->
Floating point strategy (NEON) --->
ARM instruction set (ARM) --->
```
