Qiming Zhixian shares about how to compile ssd202d scheme SDK

Qiming Zhixian 2022-06-09 01:27:26 阅读数:266

qiming zhixian shares compile ssd202d

Tips : As Espressif (Lexin technology) Greater China partners and sigmastar (Xiamen Xingchen) VAD partners , Qiming Zhixian not only carefully sorted out the problems you may encounter in the development process, but also provided a concise tutorial for the development partners to refer to . At the same time, we also carefully sorted out the new products of Lexin and Xingchen Technology 、 Main features and application of the new scheme ! I hope you can understand and quickly use good solutions and products at the first time !

One 、 compile SSD202 SDK

compile uboot

- Environment configuration

```
export ARCH="arm"
export CROSS_COMPILE=arm-linux-gnueabi-
```

- Select model related config

```
# Profile directory ssd20x-uboot-open/configs, compile WT2022
make WT2022_defconfig
```

- compile

```
make clean
make -j4
```

- Replace burning image

```
cp ${SDK_PATH}/ssd20x-uboot-open/u-boot_spinand.xz.img.bin ${SDK_PATH}/ssd20x-images-
open/WT2022/boot/u-boot_spinand.xz.img.bin
cp ${SDK_PATH}/ssd20x-uboot-open/u-boot_spinand.xz.img.bin ${SDK_PATH}/ssd20x-images-
open/WT2022/uboot_s.bin
```

- flash The selection

回到顶部

```
cd ${SDK_PATH}/ssd20x-images-open/partition
./part.sh # The default is 128MB(1Gbit)flash To configure ,256MB(2Gbit)flash Need to
transfer in 2G Parameters
cp cis.bin ${SDK_PATH}/ssd20x-images-open/WT2022
```

- Participate in UBOOT The detailed introduction of the binary file produced by partition can be referred to : Development - Application development reference - System related - SSD_ System partition

Two 、 compile kernel

- Environment configuration

```
export ARCH="arm"
export CROSS_COMPILE=arm-linux-gnueabi-
```

- Select model config

```
# Profile directory ssd20x-kernel-open/arch/arm/configs
cd ${SDK_PATH}/ssd20x-kernel-open
make WT2022_defconfig
```

- compile

```
make clean
make -j4
```

- Replace burning image

```
cp ./arch/arm/boot/uImage.xz ${SDK_PATH}/ssd20x-images-open/WT2022/kernel
```

3、 ... and 、 Make a file system

- ubi The partition file system is ssd20x-rootfs-open/ssd20x Under the table of contents , Just unzip the file system , Add customized software to take effect , No need to recompile the system image , In the ssd202 Add an application as an example :

```
cd ${SDK_PATH}/ssd20x-rootfs-open/ssd202
tar zxvf root-sstar.tar.gz # root-sstar.tar.gz To compile openwrt Generated root-
sstar
cp ${Youer_Files} ${SDK_PATH}/ssd20x-rootfs-open/ssd202/root-sstar/usr
```

 回到顶部

- After adding files , Execute the packaging script of the corresponding partition file system

```
sudo apt-get install mtd-utils # Package dependency mtd-utils, This tool needs to be installed in advance
cd ${SDK_PATH}/ssd20x-rootfs-open
./mk_tools.sh
./mk_ubi.sh ssd202
```

- Replace

```
mv root.ubi ${SDK_PATH}/ssd20x-images-open/WT2022
```

Four 、 compile openwrt

- if necessary openwrt Support for additional software functions , You need to compile sdk, Replace image , Do it alone UI This step is not required for development or drive development :

```
# obtain openwrt Source code
git clone https://gitee.com/qiming-zhixian/ssd2xx-openwrt-open.git
cd ssd2xx-openwrt-open
git clone https://gitee.com/qiming-zhixian/ssd20x-kernel-open.git
cd 18.06
# Update download package list feeds
export GIT_SSL_NO_VERIFY=1
./scripts/feeds update -a
./scripts/feeds install -a
# Take effect of the adapted model configuration -> 18.06/wtconfig/WT2xxx
make WT2022_wt
# compile , Generate mirror path 18.06/bin/targets/sstar/ssd20x/WT2022
make V=s -j4
# Replace burning image
cp bin/targets/sstar/ssd20x/WT2022/WT2022-uImage.xz ${SDK_PATH}/ssd20x-images-open/WT2022/kernel
cp bin/targets/sstar/ssd20x/WT2022/WT2022-root-ubi.img ${SDK_PATH}/ssd20x-images-open/WT2022/root.ubi
```

At the beginning of development , You can use us 7 Inch color screen development board or dual port development board
