

Usb Q&A

Q1: Can the USB3.0 port output YUV422 data through UVC?

Yes, refer to the prog_uvc demo.

Q2: When running prog_uac, the log shows ST_UAC_Init: cannot open device '/dev/snd/pcmC0D0c': No such file or directory?

The analysis idea is as follows: /dev/snd/pcmC0D0c belongs to the device under the ALSA architecture. The error report indicates that the recording pcm device node is missing. Check whether u_audio.ko and usb_f_uac1.ko have successful ismod. These two drivers are dependencies of the alsa framework.
